ASCEPT International Travel Award Report

I would like to gratefully acknowledge the generosity and support of ASCEPT for the International Travel Award that allowed me to attend and present my work at the 16th World Congress of Basic and Clinical Pharmacology (WorldPharma2010) held in Copenhagen, 17-23 July 2010.

The WorldPharma2010 meeting attracted many international renowned researchers. The scientific program was diverse, covering a range of topics from basic to clinical pharmacology. The opening lecture by Professor Jeffrey Aronson was very stimulating. The quality of the plenary lectures was outstanding. The plenary lectures presented by Professor Matthias Schwab on the personalised medicines beyond pharmacogenetics, and by Professor Olavi Pelkonen on the drug metabolism were particularly inspiring.

The WorldPharma2010 meeting was an excellent opportunity to present my work through poster and oral presentations, and to discuss and obtain ideas with researcher from all around the world. My poster presentation was met with great interest. The highlight of my poster presentation was when Professor Donald Singer from the British Pharmacological Society approached me to conduct an interview about my project (link: <http://www2.warwick.ac.uk/fac/med/research/csri/research/cpt/media/>). My oral presentation went also well. I have received a very positive feedback regarding my work.

I am very grateful to ASCEPT for providing me with an International Travel Award to attend the WorldPharma2010 scientific meeting, and to explore beautiful Copenhagen.

Yours sincerely,
Danijela Gnjidic
